

# TORKEl 840/860

## Battery Load Units

- Batteries can be tested “in service”
- Unit adjusts to include load currents in the test parameters
- User adjustable alarm and shutdown points to avoid excessive discharge
- Easily expandable for larger battery banks using TXL extra load units
- View test parameters/results “real time” as testing progresses using TORKEl WIN software (optional)
- Easily save results to a PC for analysis, report generation and storage

### Description

Batteries in power plants and transformer substations must provide the equipment they serve with standby power in the event of a power failure. Unfortunately, however, the capacity of such batteries can drop significantly for a number of reasons before their calculated life expectancy is reached. This is why it is so important to check batteries at regular intervals, and the only reliable way of measuring battery capacity is to conduct a discharge test.

TORKEl™ 840 - UTILITY is used for battery systems ranging from 12 to 250 V – often encountered in switchgear and similar equipment. Discharging can take place at up to 110 A, and if higher current is needed, two or more TORKEl 840 units or extra load units, TXL, can be linked together. Tests can be conducted at constant current, constant power, constant resistance or in accordance with a pre-selected load profile.

TORKEl 860 - MULTI is designed primarily for people who travel from place to place to maintain battery systems having different voltages. It features excellent discharging capacity plus a broad voltage range and outstanding portability – a unique combination.

TORKEl 860 is used for systems ranging from 12 to 480 V, and discharging can proceed at up to 110 A. If higher current is desired, two or more TORKEl 860 units or extra load units, TXL, can be linked together. Discharging can take place at constant current, constant power, constant resistance or in accordance with a pre-selected load profile.

### Application example

Testing can be carried out without disconnecting the battery from the equipment it serves. Via a DC clamp-on ammeter, TORKEl measures total battery current while regulating it at a constant level.

The TORKEl is connected to battery, the current and the voltage alarm level are set. After starting the discharge TORKEl keeps the current constant at the preset level. When the voltage drops to a level slightly above the final voltage, TORKEl issues an alarm. If the voltage drops so low that there is a risk for deep discharging the battery, TORKEl shuts down the test. The total voltage curve and the readings taken at the end of the test are stored in TORKEl. Later, using the TORKEl Win program (optional), you can transfer these readings to your computer for storage, printout or export. If your PC is connected to TORKEl during the test, TORKEl Win builds up a voltage curve on the screen in real time and displays the current, voltage and capacity readings. You can also control the test using TORKEl Win.

**Features and benefits**

1. Display
2. External measurement input used to measure current in an external path by means of a clamp-on ammeter or a current shunt.
3. Keys for operation and settings.
4. Alarm output equipped with a relay contact for triggering an external alarm device.
5. Start/Stop input used for starting and stopping discharging from an external device. Galvanically isolated.
6. Indicating lamps. Operating, Stop/Limit
7. TXL output used for control of TXL Extra Loads. Galvanically isolated.
8. Serial port used for connection to a PC or other controlling equipment.
9. Voltage controlled circuit breaker that connects / disconnects the loading circuits in TORKEl from the battery.
10. Positive current connection for battery being tested.
11. Input for sensing voltage at the battery terminals.
12. Negative current connection for battery being tested.
13. Mains connector, equipped with ON/OFF switch.

**Application examples with TORKEl/TXL systems**

TORKEl and TXL can be combined into systems to match up for different battery capacities. These resistive extra loads do not perform any regulating functions. They are designed for use together with TORKEl Battery Load Units. Their purpose is to provide higher load currents for use in constant current or constant power tests. Together, TORKEl and the TXL Extra Loads form a system that can discharge batteries with currents of up to several kA. TXL Extra Loads are connected directly to the battery, and TORKEl measures the total current using a clamp-on ammeter. TXL Extra Loads are shut down automatically when TORKEl is stopped.

**TORTEL Win**

- Shows the complete voltage curve
- Last recorded time, voltage, current and discharged capacity
- Scroll-window for all recorded values
- Remote control of TORTEL
- Report functions

Note: TORTEL Win PC SW is delivered with TORTEL but an optional license (SW key) must be ordered to run it together with a TORTEL.

**Extra loads**

- Four extra loads available: TXL830, TXL850, 870 and TXL890

**Cables**

**Clamp-on-ammeters**

- Clamp-on ammeters, 200 A DC and 1000 A DC
- To measure current in circuit outside TORTEL

**BVM**

- Automates battery voltage measurement during capacity tests
- "Daisy-chain" design allows expandability up to 120 units
- High accuracy and stability for precise data collection
- Integrates with TORTEL Win (included) and PowerDB Test Data Management software (freeware)
- For complete information see the BVM data sheet
